

Products that have passed the Odette OFTP2 Software Interoperability Tests

The Odette OFTP2 Software Interoperability Testing Service is intended to ensure flawless communication between the various OFTP2 software packages available on the market. For software providers the tests are designed to prove that they have correctly implemented the OFTP2 specification including the various security features. For companies wishing to implement OFTP2 this new service means that they can rely on the proven interoperability of software which has been tested against Odette specifications, making the job of software selection that much easier.

Software providers who participated in the development of the OFTP2 specification (Core Developers) have proved the interoperability of their OFTP2 products and have successfully completed the tests. Most of these companies operate internationally.

Further providers may offer OFTP2 software, however products have not been tested and Odette cannot make any statement about their interoperability and compliance with the specification RFC5024.

Help on OFTP2 implementation can be found [here](#).

Please note that this list is provided by Odette without liability.

AXWAY

Provider:	Axway	
Software Product:	TradeSync Integration Manager 3.6	
Contact:	Axway Kurfuerstendamm 119 D-10711 Berlin Germany Dietmar Koch Tel: +49 30 8901 00 eMail: dkoch@axway.com Web: www.axway.com
