

OFTP2 Software Interoperability Testing Service Terms and Conditions

This document governs the provision of OFTP2 Interoperability Testing Service by

Odette International Ltd.
71 Great Peter Street

London
SW1P 2BN

(hereinafter referred to as Odette)

1

Odette offers an interoperability testing service to software providers, who have developed communication software and implemented the OFTP2 file transfer protocol.

The interoperability tests are designed to

- Validate a compliant implementation of the protocol according to RFC 5024 by the software vendor
- Check the compliance of the software product with the OFTP2 implementation guideline, especially chapter II, "Developer Implementation Guideline"
- Test the correct implementation of the Odette Security Certificate Exchange (SCX) recommendation regarding the fetching and processing of Basic and OFTP2 Trust-service Status Lists (TSL).

2

The tests are based on the following documents

- [RFC 5024 – OFTP2](https://forum.odette.org/publications/telecommunications/OFTP2-rfc5024-v1-0.pdf)
- [OFTP2 – Implementation Guideline V2.0](https://forum.odette.org/publications/telecommunications/OFTP2-IG-V2.0.pdf)
- [Security Certificate eXchange V1.0](https://forum.odette.org/publications/security/security-certificate-exchange/SCX%20V1.0.zip)
- [OFTP2 – Interoperability Tests V2.3](https://forum.odette.org/oftp-v2/oftp2-interoperability-tests/OFTP2-Interoperability-Tests-2.3.pdf)
